

m.id

The two-factor-authentication without additional hardware

M.ID is

- convenient and beneficial (BYOD)
- a pure Swiss software solution
- universal applicable (Citrix, OWA, VMware, ...)

M.ID uses

- mobile device / table for proof of identity
- Active Directory to store M.ID user data

M.ID provides

- Passcode delivery by SMS/Email
- Passcode generation by App
- Active Directory Password Reset
- Access Control

M.ID relieves

- Helpdesk (Self-Management-Features)
- Technics (update during live operations)
- Budget (no recurring costs)

Many two-factor authentication solutions are based on additional hardware devices such as USB sticks, smart cards, cross-off lists) which must be carried along cumbersome.

Swiss SafeLab M.ID solves this problem elegantly:

The OTP (one-time-password) is sent by SMS or email to your mobile phone or can be generated by an app directly on the smartphone / tablet. Thus, a logon process is possible in a dead spot or after a mobile phone loss.
